

Digitizing the Past: Prague Talks on Digital Humanities

A series of talks on Digital Humanities organised by the ERC funded research group TRIPTIC-EU within the Department for the Study of Ancient and Medieval Thought (Institute of Philosophy, Czech Academy of Sciences).

Pim van Bree and Geert Kessels (LAB1100)

online **nodegoat** workshop

November 21, 2022

2:00 – 5:00 CET

nodegoat is a web-based data management, network analysis, and visualisation environment which is conceptualised and maintained by LAB1100. Due to nodegoat's ability to store, analyse, and visualise complex datasets, it is used by various research projects to analyse datasets ranging from catchment areas of medieval universities to networks of twentieth century hispanic cultural mediators.

nodegoat allows you to define any number of custom data models and therefore to create the research environment based on the specific needs of your project. It can be used as a collaborative workspace to create, manage, analyse and visualise data, all of which will be presented during this workshop.

To join this workshop please register at <https://bit.ly/nodegoat>
